

Apple Macintosh Operating System Waiver

The Apple Macintosh Operating System Waiver form codifies a waiver process that culminates in the Office of the CIO at Marshall Space Flight Center. It provides a mechanism to waive the Agency requirement for the Apple Macintosh Operating System upgrade to be loaded on all machines that are part of the Marshall Network environment. Examples of possible waiver conditions include: legacy systems, stand alone (not connected to any network), and mission systems. Attach a sheet listing the machine name, operating system and IP address if the waiver is intended for a collection of machines within the same environment.

Machine Name:	Operating System:	Property Tag Number:	IP Address:

Justification for Waiver

The justification must describe the adverse impact caused by the Apple Macintosh Operating System upgrade and/or the technical reason that the Apple Macintosh Operating System upgrade cannot be loaded onto the computer for which a waiver is requested.

Mitigation Strategy

The mitigation strategy must address the processes that ensure how the computer(s) will be managed until the machine(s) is/are migrated to the Agency-required version of the Apple Macintosh Operating System.
